

A DRIVING SOLUTION FOR QUADRIPLLEGICS

Push-Pull & Push-Radial

The Long Arm Brake and Accelerator combines the two functions in one device. Designed specifically with the needs of the person with quadriplegia in mind. Braking requires one third less effort compared to conventional controls. The radial action acceleration offers extremely balanced throttle activation through corners and over bumpy surfaces.

FEATURES

- Greater sensitivity when braking
- Smooth acceleration with minimal fatigue
- Acceleration safety cut-out mechanism
- Push/Radial or Push/Pull options available
- Electronic brake locking function
- Easy height and angle adjustment
- Knee airbag compatible
- Left and right hand versions
- Easily incorporated with voice command for activation of auxiliary controls
