

# SG120 HOIST

The SG120 Hoist is suitable for carrying a scooter or powerchair up to 120kgs. Its slanted head design makes

it suitable for a wide range of vehicles, particularly where head space is limited. The versatility of the SG120 is demonstrated in the adjustable height and arm that allow the customisation of the hoist to work with the scooter in the specific vehicle. It ensures the bumper of the vehicle can be cleared when lifting or lowering.

The simple electronic control function ensures reliability, ease of use, and controlled movement. When not in use the head unit of the SG120 can be folded down returning space to the boot. A great solution when the weight of the personal mobility equipment is too heavy for manual lifting and stowing.

Folding Head Unit

## FEATURES
